PHP – MySQL with Forms

With the already created database and the table student with attributes regno, name gpa and email by setting regno as primary key, perform the following

1. Design a form with regno, name, gpa and email as fields.
2. Validate each field
3. Get the values from the form and insert the same into the table.
4. Create another form with regno as field. Get a value and delete the record with that regno from the table.
